## Lenzing received several prizes at the Corona awards

Sbt.: Lenzing was awarded for the introduction of the blockchain technology for fiber identification as well as its achievements as a leading company and significant economic engine in the region

Lenzing – On November 4, 2019, Lenzing AG won the “Digital Corona” in Gold. The coveted business prize was awarded for the first time in this category. It is awarded to companies that have dynamically advanced the digitization of business processes, products, services and business models in recent years. At the premiere, Lenzing was delighted to receive the first prize for the introduction of the blockchain technology for fiber identification along the textile value chain.

“Consumers increasingly want to understand the ingredients and suppliers of the products they buy, requesting a new level of transparency and traceability. With the introduction of blockchain technology, Lenzing is pursuing the ambitious goal of creating full transparency across the value chain, driving change in an industry where less than five percent of the top 250 apparel brands can track their garments back to the fiber origin”, Stefan Doboczky, CEO of the Lenzing Group, says. Lenzing enables its customers and partners to identify TENCEL™ branded fibers across each production and distribution step from fiber-to-retail. The technology also allows consumers to verify the garment composition and the underlying textile supply chain at the point of sale, simply by scanning the barcode with a mobile device. As a result, Lenzing also directly supports the business with its very sustainably produced TENCEL™ lyocell fibers.

With LENZING™ ECOVERO™ branded fibers Lenzing was the frontrunner in physical traceability and is now entering the age of digital traceability. After joining the platform of the technology company TextileGenesis™ earlier this year, Lenzing presented the first pilot at this year’s Fashion Summit in Hong Kong. This pioneering pilot project was conducted in close cooperation with TextileGenesis™, WWF and Hong Kong based brand Chicks. This was a significant milestone in the introduction of blockchain technology. Over the coming months, Lenzing is carrying out further pilot tests involving partners along the entire value chain and expects the platform to be fully operational as of 2020.

### **Strong signal for industrial location Upper Austria**

In addition, Lenzing received Bronze for the “Standort-Corona” for its achievements as a leading Upper Austrian company and major economic engine in the region. With its continuously high investment activity at the Lenzing site, the company is constantly contributing to the strengthening of the economic area. In 2019, Lenzing successfully completed its expansion and modernization drive at the pulp plant at the Lenzing site, increasing production capacity to 320,000 tons per year. As part of its ambitious climate goals, Lenzing also decided to invest EUR 40 mn to expand the production of the raw material sulfuric acid at the Lenzing site. This comprises an important milestone on the path towards climate neutrality. In the future, a new air purification and sulfur recovery plant will not only optimize the company’s self-sufficiency for this raw material and enhance process reliability but improve environmental protection within the context of a clear forward-looking strategy.

With approx. 3,100 employees (as at 30.06.2019) at the Lenzing site, including more than 130 apprentices, the Lenzing Group is one of the leading companies in the industrial location of Upper Austria and, as such, also an important employer and driver of growth and innovation. The research and development activities are bundled in the central area “Global Research & Development” at the Lenzing site; at the end of June 2019, approx. 200 employees were involved in the field of new and further development of technologies, processes, products and applications in the field of wood-based cellulosic fibers.

### About the Lenzing Group

The Lenzing Group stands for ecologically responsible production of specialty fibers made from the renewable raw material wood. As an innovation leader, Lenzing is a partner of global textile and nonwoven manufacturers and drives many new technological developments.

The Lenzing Group's high-quality fibers form the basis for a variety of textile applications ranging from elegant ladies clothing to versatile denims and high-performance sports clothing. Due to their consistent high quality, their biodegradability and compostability Lenzing fibers are also highly suitable for hygiene products and agricultural applications.

The business model of the Lenzing Group goes far beyond that of a traditional fiber producer. Together with its customers and partners, Lenzing develops innovative products along the value chain, creating added value for consumers. The Lenzing Group strives for the efficient utilization and processing of all raw materials and offers solutions to help redirect the textile sector towards a closed-loop economy.
